Australia is working hard so that everyone will be able to get safe and free COVID-19 vaccines, which will keep us all strong, so that we can live normal COVID-Safe lives.

The COVID-19 vaccines are being carefully tested by expert doctors to make sure that all vaccines that we might use here in Australia are very good and very safe.

After we know that the vaccines work well and are safe, they will start to be given to people. The first people to get the vaccines will be those who need it the most.
